---

## Research Interests

My research area is astrophysics, with a primary focus on cosmology. I have research interests in a number of areas, including but not limited to the pre-atomic era of the very early universe, recombination, reionization, large scale structure, and binary systems.

I am interested in doing cosmology with the 21-cm signal from neutral hydrogen during the reionization epoch. My current work in this area focuses on developing new methods to study observables such as primordial magnetic fields and gravitational waves using high-resolution maps of the 21-cm line. I also enjoy thinking about radio interferometry, and have previously worked on its application to studying the global 21-cm signal. I have also worked on the thermal evolution of the intergalactic medium during the cosmic dawn era, when the global 21-cm signal is expected to be observable. In a broader sense, I also think about aspects of cosmic structure formation in the dark-ages, and its implications for observables in the later universe.

A second theme of my research is astrophysical applications of strong gravitational lensing. Along with collaborators, I worked on one of the first theoretical papers about highly magnified stars within background galaxies behind massive galaxy clusters. Our predictions for the observational appearance of the stars, including both the image distribution and the lightcurve, were borne out by the first detection in the lensing cluster MACSJ1149. I am working on several applications of such systems to detecting low-mass dark matter substructure inside lensing clusters. I have also worked on the predictions for strongly lensed and multiply imaged gravitational wave mergers that will be seen by LIGO.

My other research interests include weak interactions of neutrinos in the early universe, and the secular evolution of binary systems. Previously, I have worked on tidal deformation of neutron stars, and its consequence for their internal oscillatory modes. Apart from these topics, at various periods, I have worked on orbital resonances in eccentric binaries, optics design for CMB experiments and, very briefly dabbled in X-ray fluorescence from kilonovae.

## Talks and presentations

---

- Lecturer, Summer School on Gravitational-Wave Astronomy, ICTS, Bangalore. 2018
- Invited panelist, Physics and Astrophysics at the eXtreme, IUCAA, Pune. 2018
- Invited talk, Thermal history of the Universe at intermediate redshift: progress with 21cm absorption measurements, CERN. 2018
- Talk, Shedding Light on the Dark Universe with Extremely Large Telescopes, UCLA. 2018
- Invited Cosmology seminar, JHU, Baltimore. 2017
- Invited Seminar, CITA, Toronto. 2017
- Talk, Fundamental Physics with the Square Kilometer Array, Mauritius. 2017
- Invited talk, Tianlai Collaboration Meeting, Fermilab, Batavia. 2016
- Invited talk, CMB Spectral Distortions From Cosmic Baryon Evolution, RRI, Bengaluru. 2016
- Invited seminar, International Centre for Theoretical Sciences, TIFR. 2016
- Invited cosmology seminar, Perimeter institute. 2016
- Cosmology lunch, joint w/ IAS and Princeton University. 2016
- Astrophysics informal seminar, IAS. 2016

- Seminar, Inter University Center for Astronomy and Astrophysics, Pune. 2015
- Seminar, National Center for Radio Astronomy, Pune. 2015
- Talk, The Primordial Universe after Planck, IAP, Paris. 2014
- Seminar, McGill University, Montreal. 2014
- Seminar, CITA, Toronto. 2014
- ITC Seminar, Harvard University, Boston. 2014
- Cosmology lunch, joint w/ IAS and Princeton University. 2014
- Talk, Theoretical Astrophysics in Southern California (TASC), UCSD, San Diego. 2014
- Special seminar, KICP, University of Chicago. 2014
- Cosmology Lunch talk, CCAPP, Ohio State University, Columbus. 2014
- Poster, Gravitational Wave Physics and Astronomy Workshop (GWPAW) at IUCAA, Pune. 2013
- Seminar, Inter University Center for Astronomy and Astrophysics, Pune. 2013
- Talk, Theoretical Astrophysics in Southern California (TASC), Carnegie Observatories, Pasadena. 2012
- Poster, Summer school on cosmology, ICTP, Trieste. 2012

## Teaching Experience and outreach

---

- Volunteer for event on occasion of partial solar eclipse  
Location: McKinley School, Pasadena Oct 2014
- Volunteer for public viewing of Supernova SN2014J  
Location: California Institute of Technology, Pasadena Jan 2014
- Teaching assistant for Ph 12a: Waves, taught by Jeff Kimble Fall 2012
- Volunteer for public event on the occasion of Venus transit  
Location: California Institute of Technology, Pasadena May 2012
