Tejaswi Venumadhav Nerella

Curriculum Vitae

Member, School of Natural Sciences 1 Einstein Drive Institute for Advanced Study Princeton, NJ 08540 Contact: Phone: (626) 826-3571 email: tejaswi@sns.ias.edu

Education

California Institute of technology

2010-2015

Ph.D. in Physics,

Advisor: Christopher Hirata

Indian Institute of Technology, Kanpur

2005-2010

M.Sc (Integrated) in Physics

Research Interests

My research area is astrophysics, with a primary focus on cosmology. I have research interests in a number of areas, including but not limited to the pre-atomic era of the very early universe, recombination, reionization, and binary systems.

I am interested in doing cosmology with the 21-cm signal from neutral hydrogen during the reionization epoch. My current work in this area focuses on developing new methods to study observables such as primordial magnetic fields and gravitational waves using high-resolution maps of the 21-cm line. I also enjoy thinking about radio interferometry, and have previously worked on its application to studying the global 21-cm signal. In a broader sense, I also think about aspects of cosmic structure formation in the dark-ages, and its implications for observables in the later universe.

I am also interested in the use of the Cosmic Microwave Background (CMB), and Large Scale Structure (LSS) as probes of curvature fluctuations in the primordial universe. I am currently developing a computer-algebra system to perform non-linear evolution of stochastically seeded fields from first-principles. I plan to use it to evaluate all lowest-order corrections to the two-, three- and four-point correlation functions of the CMB and LSS purely due to non-linear evolution.

My other research interests include weak interactions of neutrinos in the early universe, and the secular evolution of binary systems. Previously, I have worked on tidal deformation of neutron stars, and its consequence for their internal oscillatory modes. Apart from these topics, at various periods, I have worked on orbital resonances in eccentric binaries, optics design for CMB experiments and, very briefly dabbled in X-ray fluorescence from kilonovae.

Academic Honors

Schmidt Fellowship Institute for Advanced Study	2015 - Present
Robert A. Millikan Fellowship California Institute of Technology	2010
International Fulbright Science and Technology Award Bureau of Education and Cultural Affairs, U.S. Department of State	2010
President's Gold Medal for the best academic performance in the graduating class in all disciplines, IIT Kanpur	2010

the graduating class in Physics, IIT Kanpur

Summer Undergraduate Research Fellowship
California Institute of Technology

Academic Excellence Award

2007, 2008, 2009, 2010

IIT Kanpur

Silver Medal, 36th International Physics Olympiad 2005

2010

KVPY Fellowship 2004

Department of Science and Technology, Govt. of India

General Proficiency Medal for the best academic performance in

NTSE Fellowship 2003

National Council of Educational Research and Training, Govt. of India

Work Experience

Member Sep 2015-Present

Institute for Advanced Study, Princeton

Graduate Student Sep 2010-Aug 2015

California Institute of Technology, Pasadena

Advisor: Christopher M. Hirata

Visiting Scientist May-August 2009

Max-Planck-Institut für Physik komplexer Systeme, Dresden

Advisor: Roderich Moessner

Summer Undergraduate Research Fellow May-August 2008

California Institute of Technology, Pasadena

Advisor: Re'em Sari

Summer Undergraduate Research Fellow May-August 2007

California Institute of Technology, Pasadena

Advisor: Andrew Lange

Refereed publications

• Gluscevic, V., Venumadhav, T., Fang, X., Hirata, C. M., Oklopčić, A., Mishra, A. (2017), Physical Review D, 95, 083011
